Our Most Popular Ceiling Lift is Fully Portable

The Portable UniLift®, or "PC-2", provides the capability of using one lift in a variety of locations and in an unlimited number of track configurations to meet any lifting need. Several sections of track can be installed at different locations and the PC-2 lift can be detached from one track, carried to another track, and then reattached. For example, the PC-2 can be used between multiple rooms, in different homes, at the office, in a hotel or all of the above. In fact, our installers are so skilled and our lift systems so versatile, that ceiling lifts have been installed in recreational vehicles, boats, around swimming pools and a variety of other unimaginable places!

So Reliable and Easy to Use!

All of our lifts not only provide a true barrier free transfer experience, they are also built for dependable use. The PC-2 Ceiling Lift motors up and down, while the caregiver can move the lift along the track with the push of a finger. Plus, with several small tracks instead of one continuous track from room to room, you will save on costly renovations to your home or facility. Just one lift services several locations of your choice!
