RAISA

The safe and comfortable standing and transfer aid to help people with weakened leg musculature

The Original RAISA lift was conceived, patented, and produced by experienced specialists – for people who cannot stand up or move from place to place safely without assistance. The standing aid RAISA can be adapted without problem to any person's body size. Depending on your wishes and needs and the model desired, the RAISA can be purchased in either motorized or manual versions. The RAISA lift facilitates straight, completely relaxed standing, as well as pleasant, light transport even over longer distances. The RAISA lift – functional and solidly built down to the last detail.

RAISA E – Motorized height adjustment of the knee pads.

RAISA Standard – Manual height adjustment of the knee pads.

RAISA with lifting hose.

RAISA with lifting sling for more stability.

The base legs are easily spread to allow direct access to wheelchair patients. Once the base is back in the normal position, the RAISA lift can pass through even narrow doorways.
